

MUHAMMAD ARSLAN

Front-End & Hybrid Mobile App Developer | Angular • Ionic • TypeScript

■ Islamabad Pakistan | ✉ arslanshafiq95@gmail.com | ☎ +92 345 0576814 | ■ LinkedIn

Professional Summary

Experienced Front-End & Hybrid Mobile App Developer with 6+ years in Android and Ionic + Angular development. Skilled in designing and developing high-performance mobile applications for Android and iOS using Android, Ionic Framework (v5–v7+), Angular (v12+), TypeScript, HTML/SCSS/CSS, REST/GraphQL APIs, and RxJS. Proficient in push notifications (FCM), offline storage, dynamic theming, and real-time messaging. Adept at delivering scalable solutions, optimizing app performance, and collaborating with cross-functional teams to achieve project goals.

Professional Experience

Ideal Innovative Solutions Pvt. Ltd.

Oct 25, 2021 – Present

Role: Front-End & Hybrid Mobile App Developer

Projects:

Mobile Sentrix Attendance Terminal App

Developed core modules, integrated REST/GraphQL APIs, implemented offline storage and dynamic theming.

Mobile Sentrix Employee App

Implemented Task Management, Timesheet, Assets Management, Scheduler, Leave, Expense, and Loan flows, with RTM integration for real-time updates.

Mobile Sentrix Employee Web Portal

Built a comprehensive HRMS web portal with modules for Leave, Loan, Attendance, Expense request/approval workflows, Task Management, and Employee Profile management.

Device Processing

Developed a specialized mobile application for tracking and processing device repairs and service orders for both managers and technicians, featuring full repair flow management, scheduling, and offline-capable data processing.

Responsibilities:

- Implemented modular architectures for scalable Ionic + Angular apps.
- Developed dynamic UI components, circular progress bars, and bottom sheet dropdowns.
- Integrated real-time messaging (RTM) and offline storage (IndexedDB and SQLite).
- Applied dynamic theming for multi-platform apps.
- Integrated REST/GraphQL APIs and FCM push notifications.
- Developed chat features using Socket.io, including real-time messaging, typing indicators, and message status updates.
- Managed socket connections and events efficiently for stable real-time communication.
- Implemented message persistence and synchronization with backend for offline and online scenarios.
- Designed new module flows and functionality, including UI interactions, form validation, and data binding, ensuring smooth front-end integration.

Stack Buffers

Dec 01, 2020 – Oct 25, 2021

Role: Android Developer

Projects:

Nutrition Coach App

Developed core Android modules, integrated APIs, and optimized performance.

World Lawyer App

Implemented modular architecture, UI/UX optimization, and offline storage.

Map Dedactor App

Integrated backend APIs, push notifications, and geolocation features.

Asaani.com App

Developed Android application from scratch, ensuring smooth performance.

Responsibilities:

- Designed and implemented Android applications from scratch.
- Integrated REST APIs and FCM push notifications.
- Optimized app performance and ensured stable, responsive UI/UX.
- Integrated Google Maps and location-based services for real-time geolocation features.
- Worked with Firebase Realtime Database for live Location synchronization.
- Implemented modular architecture and reusable components for maintainable code.
- Conducted device testing to ensure compatibility across different Android versions and screen sizes.

AIG IT Solutions

Feb 01, 2019 – May 10, 2020

Role: Android Developer

Projects:

Temperature View App

Developed Android app with real-time data updates and API integration.

Auto Assistant App

Implemented core modules, push notifications, and modular architecture.

Prayer Time App

Developed Android application with offline support and dynamic UI updates.

Responsibilities:

- Developed multiple Android apps with optimized UI/UX and scalable architecture.
- Integrated backend APIs and implemented offline data storage.
- Ensured app stability, performance, and user-friendly interfaces.
- Implemented features for Auto Assistant App, including automated scheduling and service management.
- Developed Prayer Time App with accurate time calculations, notifications, and offline support.

Skills

Android, Java, Ionic (v5–v7+), Angular (v12+), TypeScript, JavaScript, HTML, SCSS/CSS, REST APIs, GraphQL, RxJS (Observables, Subjects, Operators), Capacitor plugins, Push Notifications (FCM), Offline Storage (IndexedDB and SQLite), Dynamic Theming, Mobile UI/UX Optimization, iOS & Android platform development, Event & State Management, Modular Architecture, Real-time Messaging, Jira, GitLab, Git Hub, Google Map

Education

■ Bachelor in Computer Science

PMAS Arid Agriculture University – 2018

Achievements

- ✓ Successfully delivered multi-platform mobile apps for Android and iOS.
- ✓ Contributed to modular architecture improvements and optimized UI/UX across projects.
- ✓ Implemented advanced real-time features using GraphQL subscriptions and RTM.
